

Display Audio Screen Dims or Goes Dark by Itself

AFFECTED VEHICLES

Year	Model	Trim
2017-19	CR-V	EX and above

We're getting reports of the Display Audio screen dimming or going dark by itself. We're currently investigating this issue and have traced its probable cause to a capacitive touch panel sensor issue.

At this time, there's no fix for this, so **don't** replace the center display unit. Current parts stock may have the same issue.

As a temporary measure, pressing the **Day/Night** icon will restore the screen. Be sure to pass this on to the service advisors so they can inform their customers.
